Carver Cares About Water

Stormwater?

Stormwater runoff occurs when rainfall, snowmelt, or drainage from irrigation flows over land, and then drains into surface water bodies and groundwater. Stormwater runoff from developed areas can be contaminated with pollutants from fertilizers, pesticides, litter, chemical spills, automobile fluids, deicing salts, pet waste and septic systems.

Runoff from developed areas is the largest pollution source responsible for the impairment of our wetlands, rivers, lakes, and ponds. Like most communities in Massachusetts Carver is legally required to reduce pollution in stormwater runoff to comply with the Environmental Protection Agency's Phase 2 Stormwater Program. Protecting Carver's water resources depends on everyone! Learn more by reading these stormwater summaries and following the links below.

What's In Your Yard?

Pet Waste

Dog waste left on roads and sidewalks are a significant source of bacteria in urban stormwater runoff. In 2018, 1,377 dogs were registered in Carver. These pets contribute over 188 TONS of dog waste each year. Most pet owners pick up and safely

dispose of pet waste, but if left on the ground, it can take over a year to decompose. Here are some good resources to share with your neighbors and friends. Help get the

Car Washing

Carver residents largely rely on automobiles for transportation from nearly 13,100 cars registered in town. Without proper maintenance, oil, grease and heavy metals from cars and trucks can contaminate stormwater runoff. Car washing can also be a source of pollution. Some simple solutions: wash the car on the lawn, use a non-phosphorous detergent, or visit a carwash that recycles the wash water, and regularly maintain your vehicle.

Working to Protect Water

Carver is a great place to live for over 11,000 people, and a great place to work. The majority of businesses are small in Carver, however commercial and industrial businesses may contribute to urban stormwater pollution from storage of vehicles, hazardous material storage and disposal, trash disposal and snow and ice control practices.

Certain businesses with specific pollution potential risks are required to obtain a stormwater permit known as the National Pollutant Discharge Elimination System (NPDES) Industrial Stormwater Multi-Sector General Permit, and must develop a Stormwater Pollution Prevention Plan (SWPPP). All businesses can protect the environment by using commercial and industrial best management practices to control stormwater runoff and minimize pollution. Here are some references to start the conversation at your work.

What is the Concern for Construction?

Construction projects are a sign of a strong economy. No matter the project size, construction projects can impact the environment. Demolition and earthmoving, operation of equipment and vehicles, as well as construction materials on the site may result contaminated stormwater in flow including sediment, debris and chemicals. Erosion and sedimentation from construction sites impact aquatic habitat by increasing turbidity and adding nutrients and pathogens to the water.

There's Lots More to Learn!

Clean stormwater runoff from natural areas is also an important source of recharge to the groundwater; replenishing groundwater wells and supplying base flow to lakes, ponds, springs, brooks and tributaries. word out! MassDEP Pet Waste Brochure Pet Waste FAQ's

> EPA Citizen's Guide for Clean Stormwater

Lawns are a source of pride to many homeowners, but they are also a source of nutrients and pesticides in urban stormwater runoff. Carver has over 3,200 residential units and over 37 acres of manicured lawn. Carver residents and landlords can help minimize environmental impacts from lawns!

Keep the Lawn Green and the Water Blue
